## GETTING STARTED

### ATARI ST/COMMODORE AMIGA:

To start the program, follow these simple steps:

1. If your computer is off insert your COOKBOOK disk in your disk drive and turn your computer on. If you are at your desktop, insert your COOKBOOK disk in your disk drive. ATARI ST users must set the screen resolution to LOW RESOLUTION to load the COOKBOOK from the desktop.
2. Use your mouse and move the pointer to the ICON labeled COOKBOOK or FILER. Click the left mouse button rapidly twice. Or, click once on the ICON and move your pointer to the top of your desktop screen and click on OPEN. Now enter the COOKBOOK SECURITY CODE. If you do not enter the correct code after three attempts the COOKBOOK will run in the demonstration mode only.

AMIGA ONLY: The COOKBOOK contains a preferences section and workbench on the main disk. If you have a generic type printer, it is not necessary to reset your printer preferences. For other printers, use this section to reset the printer preferences on the COOKBOOK disk. Follow the instructions for setting your printer preferences in your Amiga manual.

### ATARI 8 BIT:(130XE, 800's & THE ATARI GAME MACHINE With A Disk Drive)

1. With your computer off and disk drive on, insert your COOKBOOK disk, hold down the OPTION key, (a grey key at the top of the keyboard), turn on your computer and enter the SECURITY CODE.
2. You will now see a frame with FILER and COOKBOOK. Use your cursor keys to select the FILER or the COOKBOOK and press the <RETURN> key.
3. If you select COOKBOOK you will be prompted with a command to flip your disk over to side 2. If you select The RECIPE FILER you will have to insert your RECIPE DISK labeled MY FAVORITE RECIPES.
4. Once the program has loaded, you can use a Mouse in port 1, a Joystick in port 2 or just your cursor keys. When using a Mouse or Joystick, do not press any buttons until you are ready to select an option. Move the Mouse/Joystick until the bouncebar highlight appears over each option. Press the LEFT Mouse or FIRE button or the Space Bar to make a selection.
5. If you are not accustomed to a windowing program on your 8 bit, these steps may appear confusing at first. However, you will find using windows to be more fun and convenient as you go through the program. Remember, when using the cursor keys to press the <SPACE BAR> after your selection is highlighted.

---

## USING THE CELEBRITY COOKBOOK

The Celebrity Cookbook is designed for simple, single key or mouse operation. Once the program is loaded, you will see a picture menu of the cookbook package. Move your mouse pointer to the top of your screen (or use your cursor keys and press <RETURN>) and click the LEFT mouse button to make a selection. For Amiga use your RIGHT Mouse button in this menu.

The top menu of the cookbook contains the following options:

Info - Volumes - Other - Recipes

INFO contains cookbook author and credit information and the necessary telephone number to call if you need assistance.

VOLUMES allows you to load and run the other volumes of the cookbook. The volumes are described on the inside of your package cover. For the Atari ST and Commodore Amiga you will also find a QUIT option under this category. 8 bit users must remove their disk and turn off their computer to quit the program.

OTHER contains Celebrity Diets, Party Tips and The Recipe Filer option. (Amiga users must use QUIT & go back to the desk top to load the filer)

RECIPES contains Celebrity Recipes divided into Appetizers, Fish & Fowl, Meat Entrees and Desserts. You will also find a Computer Chef section, a Wine Directory and a Bar Guide.

If you choose a recipe category you will see a subdirectory of recipe listings. Simply move your mouse pointer (joy stick or cursor keys) to the recipe of your choice to select a recipe and click the left mouse button (or press <RETURN> or the FIRE button).

For the ST and AMIGA you have the option of viewing the recipe or going directly to the print resize a recipe option. You will see a screen prompt which states: Do You Wish To View The Recipe: Yes No. Simply click your mouse button on the Yes or No box.

To advance the recipe frames click on the bottom line option: NEXT or simply press the <RETURN> key. Amiga users will see CR instead of NEXT. To exit any part of the cookbook click on the bottom option Menu or press ESC (Escape).

Some sections of the cookbook contain multiple menu options, i.e The Wine Directory. Whenever you see Menu in the center box this means that you can go back one menu at a time by clicking on this box. Should you press ESC or click on the ESC box when the center box contains the word MENU you will go back to the main picture menu.

## CHANGING RECIPE SERVING SIZES AND PRINTING A RECIPE

The Cookbook permits you to vary the number of servings of the celebrity recipes. We call this RESIZING. To RESIZE a recipe you must first view the recipe (if 8 bit) or elect not to view the recipe. At the end of each recipe you will be given the option to resize. Simply click on the bottom menu box RESIZE or press the RETURN Key (If 8 bit press the SPACE BAR).

You will see a prompt to enter a new serving size. You may enter any number but 0. Then press the <RETURN> key. If you press <RETURN> without entering a serving size you will go back to the last Menu.

Printing A Recipe: After you have opted to view or not view the recipe, click on the bottom menu line labeled Print or use your keyboard and press the key command next to the word print. You will be given the option of printing in 40 or 80 columns, centered or left justified, ingredients only (if the recipe lends itself to this) or the entire recipe with directions, etc. Simply use your mouse, cursor keys, etc. and click on your choice. The cookbook supports both 40 and 80 column printers.

If you have an 80 column printer, the recipes are preset to print in an 80 column format; even if you select the 40 column option.

## YOUR PERSONAL RECIPE FILER

Your Personal Recipe Filer is a word processing program designed for easy use and for organizing your favorite recipes. With the Recipe Filer you can create your own cookbook or customize a recipe to serve up to 999 guests. You can also use the filer to write letters, etc. The filer recognizes the difference between recipes and other files.

Directions for using the recipe filer are stored on your cookbook disk. To access the directions you must first load the filer and then use your mouse, etc. to go to the OTHER section of the filer's top menu.

Select the option READ INSTRUCTIONS. The instructions will then load and display. You can print the instructions by pressing ESC and reselecting the OTHER option and selecting PRINT FILE (RECIPE if 8 bit). Now simply press the return key until the instructions begin printing on your printer. You must first turn your printer on and make certain it is on line. Amiga users may first have to exit the filer, go to the desktop, and reset their printer preferences.

While in the EDIT mode of the Filer, you can press the HELP key for a function chart describing the various key combinations necessary to use the filer program.

**IMPORTANT:** Make a backup copy of the cookbook diskette first. Do not attempt to save a recipe to the main cookbook disk. Use a data disk for this purpose. Atari 8 Bit Only: Make a copy of your My Favorite Recipe Disk. DO NOT FORMAT THIS DISK; IT CONTAINS THE RECIPE FILER PROGRAM.

**AMIGA AND ST ONLY:** Use your Desk Top, etc. to format your recipe disk. Then load a recipe from the filer i.e party salad and select the save Option. Then click on SETUP to make your recipe disk a cookbook diskette.

If you did not receive a free recipe disk please send us your warranty card and a note and we will send you a free recipe disk.

We hope you enjoy your Cookbook program and look forward to any comments you may have.
